Prevent Pollution

It's time to change habits on the Earth to change the oceans.

- Until 2050, there will be more plastics than fish in the oceans.
- There are more than 260 species of sea animals, endangered from the plastics in the oceans.
- Every year, 640.000 tons of already used fishing nets fall into the oceans.
- Fishing nets are deadly for sea animals.

It's time to make a CHANGE. Reuse plastics that are already on the planet. Prevent ocean pollution.
